

MetaProducts DeskTool

Run programs from a floating toolbar

Product Description

DeskTool is a handy Windows program that saves time when accessing and launching your most-used applications. By putting buttons for popular files and programs into DeskTool's compact toolbar, you can find them immediately and launch them with a single click.

DeskTool also supports menu buttons, allowing you to group frequently used programs into drop-down menus. Users can group applications by topic, businesses can use separate menu buttons for each employee, schools can assign menu buttons to individual students, and parents can create menus for their children.

Easy to use

Adding icons to DeskTool is as easy as dragging them from your desktop or from Explorer, and dropping them onto the toolbar. You can replace an application's default icon with a custom icon. Deleting and moving icons is a simple matter of dragging and dropping them. You can even use context (right-click) menus to send applications to your DeskTool toolbar.

DeskTool can float anywhere on the desktop or be docked to any of the four edges of the screen. You can set DeskTool to always be on top, or you can auto-hide the toolbar when it's docked to an edge. Optionally, the toolbar can be hidden until the DeskTool icon in the system tray is clicked.

Command Box

Power users will enjoy DeskTool's Command Box. Similar to the Run dialog in the Windows Start menu, the Command Box lets you run applications and pass them parameters, as well as issue shell commands. DeskTool's application launch buttons can also be configured to contain command-line switches and Windows specifications.

DeskTool eliminates the need to minimize other programs and search for icons on your desktop, or waste time looking for programs in your Start menu. With its tight integration with the Windows operating system, applications are launched quickly and efficiently. All of your favorite programs are easy to find, and one click away.

System requirements:

- Microsoft® Windows® 95, Windows 98, Windows 98 Second Edition, Windows Millennium Edition, Windows 2000, Windows NT® 4.0, Windows XP, Windows 2003 or Windows Vista
- 64MB of RAM, or the minimum memory required to run Windows
- 1Mb of available hard-disk space
